                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a chimera gene of p53 family encoding a transcription activating region, a DNA binding region, and an oligomer formation region of different p53 family proteins. The chimeric gene can be used for gene therapy of p53 variant human tumours, and analysis of the function of the p53 family gene. The present sequence was used in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAAGAAAGTTATTACCGATCCACCATGTCCCAGAGCACACAGACAAATGAATTCCTCAGT 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes human lung tumour proteins. Human lung actimucar proteins and polynuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynuclectides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

AAACGAAGATCCCCAGATGATGAACTGTTATACTTACCAGTGAGGGGCCGTGAGACTTAT 1260 The present invention concerns the discovery of a new family of cell regulatory proteins (CRPs) termed the p63 family of proteins, which demonstrate certain sequence identity to known tumour suppressor proteins p53 and p73. It has been observed that the intron exon organisation is conserved between p73 and p53, and from known exon and intron sizes for these 2 genes, it was possible to identify new members of this gene family using a PCR-based strategy of amplifying 2 exons in a conserved domain and their intervening intron. The human p53 gene was localised to chromosomal position 3427-29. At least 6 different isotypes exist. Splice variants differing at the C-terminus have been designated as alpha, beta and gamma forms, while p63 members differing in the N-terminus are and this base represents a nucleotide missing from the sequence given in the specification. It is included to maintain the nucleotide numbering given in the specification for this sequence. Human cell regulatory protein p63, isoform huTAp63 gamma, cDNA. New isolated p63 cell regulatory protein for, e.g. treatment of Cell regulatory protein; p63; huTAp63 gamma; TAp63 gamma; cancer; tumour suppressor; cell cycle control; apoptosis; cell proliferation; cell differentiation; therapy; ss. Location/Qualifiers 1254 AAX58574 standard; cDNA; 1347 BP Claim 1; Fig 11; 161pp; English. 98US-0087216. 97US-0062076. 98WO-US21992. 16-AUG-1999 (first entry) (HARD) HARVARD COLLEGE. /*tag= /note= WPI; 1999-277595/23.           transactivation domain. The present sequence represents a cDNA close encoding human Tap63 gamma. p63 was detected in a variety of human and mouse tissue. It demonstrates remarkably divergent a activities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression may play a critical role in the process of cervical squamous differentiation, both benign and neoplastic. DeltaN isotopes of p63 act as dominant negatives towards transactivation by p53 and p63. Cachexia) and neuronal differentiation and related degenerative disorders. p63 polypeptides (see AANO5953-64), polynucleotides (see AAN55572-83) and anti-p63 antibodies of the invention can be used to identify compounds useful for treating disorders involving such processes, in detection and diagnosis, and in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      480

This invention describes a novel KET-encoding nucleic acid (I) and its fragments, variants and mutants which has anticancer activity. (I) encodes a protein, (II), involved in control of the cell cycle and apoptosis, i.e. (II) is a tumor suppressor protein which belongs to the coll family. (I), and the polypeptide (II) encoded by it, are used (a) to detect (I) in biological samples, specifically anglogenic tumor tissue, including (I) sequences that have a homozygotic deletion and (b) to detect presence or absence of human chromosome 3427 or murine chromosome 16, or their fragments, by hybridization. Also, (I) is used as a tumor purpressor, particularly in tumors where an alteration in the wild-type (B) allele has not been identified. (I) and (II) may also be used for development of specific cytotoxic agents and for predicting the risk of developing cancer. This sequence represents the human KET cDNA sequence
                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                   161

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 401
                                                                                          This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynocleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting calls expressing P2 and then administered to the patient to inhibit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  701
                                                                                                                         The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions compositions compositions the lung tumour proteins, polynucleotides, antibodies, express the lung tumour proteins, or antigen presenting cells that express the lung tumour proteins are useful for treathing lung cancer or stimulating an immune response. ABI48959 to ABI49300 and ABB74946 to ABB7700 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                    CCCAGCTCATTTCTCTTGGAAAGATATTACCGATCCACCATGTCCAGAGCACACA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                          The present invention concerns the discovery of a new family of cell regulatory proteins (CRPs) termed the p63 family of proteins, which demonstrate certain sequence identify to known tumour suppressor proteins p53 and p73. It has been observed that the intron exon organisation is conserved between p73 and p53, and from cknown exon and intron sizes for these 2 genes, it was possible to choose the conserved domain and their intervening intron. The human p53 gene was localised to chromosomal position of aq27-29. At least 6 different isotypes exist. Splice variants of gamma forms, while p63 members differing in the N-terminus are designated as deltaN and TA forms, where the deltaN form lacks the transactivation domain. The present sequence represents a cDNA clone encoding human TAp63 beta. p63 was detected in a variety of human and mouse tissue. It demonstrates remarkably divergent activities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression may play a critical role in the process of cervical squamous differentiation, both benign and neoplastic. DeltaN isotopes of p63 act as dominant negatives towards transactivation by p53 and p63. Cachexia) and neuronal differentiation and related degenerative disorders. p63 polypeptides (see AAX58512-83) and anti-p63 autibodies of the invention and related degenerative concerns, and an euronal differentiation and related degenerative disorders. p63 polypeptides (see AAX58512-83) and anti-p63 autibodies of the invention of the processes, in detection and diagnosis, and in the production of transactive and in the production of transactive and in the production of transactive and in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel isolated polypeptide (I) which which have cynostatic activity. The polypeptides and polynocleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention detection at subsequent time points and comparing the results from the different time points and comparing the results from the are treated with P2, polynucleotides encoding P2 or antigen presenting development of cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                         The present invention describes human lung tumour proteins. Human lung tumour proteins and polynuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynuclectides, antibodies, fusion proteins. T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABU48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

-1- SUBGNIT: THE C-TERMINAL OLIGOMERIZATION DOMAIN BINDS TO THE ABL
TYROSINE KINASE SH3 DOMAIN. ISOFORM BETA INTERACTS HOMOTYPICALLY
AND WITH P53, WHEREAS ISOFORM ALPHA DOES NOT. ISOFORM GAMMA
INTERACTS WITH ISOFORM GAMMA, ALPHA, AND HOMOTYPICALLY.

-1- SUBCELLULAR LOCATION: NUCLEAL.
-1- ALTERNATIVE PRODUCTS: 7 ISOFORMS; ALPHA (SHOWN HERE), BETA, GAMMA,
DELICA, EPSILON, ZETA AND KAPPA; ARE PRODUCED BY ALTERNATIVE
SPLICING. THE SPLICING OF EXON 11 IN GAMMA AND EPSILON ISOFORMS
RESULTS IN A FRAMESHIEF FROM THE ORIGINAL READING FRAME.
-1- TISSUE SPECIFICITY: BRAIN, KIDNEY, PLACENTA, COLON, HEART, LIVER,
TO THE ALPHA ISOFORM.
-1- INDUCTION: NOT INDUCED BY DANAGETY.
-1- INDUCTION: NOT INDUCED BY DANAGETY.
-1- DOMAIN: POSSEES AN ACIDIC TRANSACTIVATION DOMAIN, A CENTRAL DNA
BINDING DOMAIN AND A C-TERMINAL OLIGOMERIZATION DOMAIN THAT BINDS
-1- TICKER SELECTIVE STANSE SH3 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1- INE ABL IINCERN ALMOSOME REGION FREQUENTLY MUTATED IN DIVERSE CELL LINES OF HUMAN CANCER. APPEARS NOT TO BE FREQUENTLY MUTATED IN HUMAN CANCER, APPEARS NOT TO BE FREQUENTLY MUTATED IN HUMAN CANCERS, IN CONTRAST TO P53. HEMIZYGOSITY IS OBSERVED IN NEUROBLASTOMA AND OLIGODENDROGLIOMA.
                                                                                                    PHOSPHORYLATION (ISOFORMS ALPHA AND BETA).

-!- SUBUNT: THE C-TERMINAL OLIGOMERIZATION DOMAIN BINDS TO THE ABL TYROSINE KINASE SH3 DOMAIN. ISOFORM BETA INTERACTS HOMOTYPICALLY AND WITH P53, WHEREAS ISOFORM ALPHA DOES NOT.

-!- SUBCELLULAR LOCATION: Nuclear.

-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; ALPHA (SHOWN HERE) AND BETA;
ARE PRODUCED BY ALTERNATIVE SPLICING.

-!- DOMAIN: POSSEBES AN ACIDIC TRANSACTIVATION DOMAIN, A CENTRAL DNA BINDING DOMAIN AND A C-TERMINAL OLIGOMERIZATION DOMAIN THAT BINDS

                                                                                                                                                                                                                                                                                                    growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes regulared for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of Bcl-2 expression (By similarity).

-I SUBCELLUIAR LOCATION: Nuclear.

-I SUBLIARITY: BELONGS TO THE P53 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BASIC (REPRESSION OF DNA-BINDING).

                                                                                                                                                                                                                                                                                                                                        Nucleic Acids Res. 16:11383-11383(1988).

1 FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as circumstances and cell type. Involved in cell cycle regulation as by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin dependent kinases. Apoptosis induction seems to be mediated either by stimulation of expression (By similarity).

1. SUBUNIT: Binds DNA as a homotetramer (By similarity).

2. SUBCELLUAR LOCATION: Nuclear.

2. SUBCELLUAR ELOCATION: Nuclear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó

"Wild-type p53 sequence of tree shrews.";
"Wild-type p53 sequence of tree shrews.";
Submitted (AdG-1999) to the EMBL/GenBank/DDBJ databases.
-I-FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. BAX and FAS antigen expression, or by repression of Bcl-2

-I-FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin dependent kinases. Apoptosis induction seems to be mediated either by stimulation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NUCLEAR LOCALIZATION SIGNAL (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SUBUNIT: Binds DNA as a homotetramer (By similarity).
SUBCELLULAR LOCATION: Nuclear.
DISEASE: P53 IS FOUND IN INCREASED AMOUNTS IN A WIDE VARIETY
OF TRANSFORMED CELLS. P53 IS FREQUENTLY MUTATED OR INACTIVATED
IN MANY TYPES OF CANCER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Spermophilus beecheyi (Beechey ground squirrel).
